

**Franktown Animal Clinic has two different kinds of therapeutic lasers to help your pet:**

- **Class I handheld laser** works well to heal wounds, lacerations, painful joints, and any other small problem areas. This type of laser includes a blue light, which has anti-bacterial properties, and a variety of settings can be used to help treat pain and inflammation and promote tissue repair. Lasers can be used for any lesion except tumors and eye problems.
- **Class IV laser** is the latest in FDA-approved healthcare for your pet. It uses deep, penetrating light to decrease pain and aid in cell healing. It is typically used for larger areas, such as for hip or widespread back pain, and is often used in conjunction with acupuncture.

*Please talk with any of our doctors to decide what is the best course of treatment for your pet.*

# Therapeutic Laser

**Therapeutic laser can be beneficial  
to your pet by stimulating and  
enhancing cell function.**
